ib2008: From Smart Homes to Connected Communities

Date: Monday 24 November 2008, 10 am - 5 pm

Venue: The Building Centre, Store Street, London

Smart home technologies have the potential to revolutionise the way in which we deliver and use our homes, going beyond the boundaries of homes into connected communities.

This one day event will consider two of the key applications for smart home technologies:

Delivering Sustainable Homes with Intelligence

Smart home systems facilitate better environmental performance by enabling buildings and systems to operate at their optimum levels.

Assistive Living

Digital systems will transform the delivery of health and social care. Smart monitoring and electronic links to healthcare providers can enable people to remain living independently in their own homes and communities for much longer, therefore reducing costs and increasing quality of life.

ib2008 is part of the *ibexcellence* programme of activities promoting UK best practice in intelligent building solutions, systems and strategies.

ib2008 is being held in partnership with the Building Centre and is being supported by the Modern Built Environment Knowledge Transfer Network.
